

Mercy Gilbert Medical Center

Gilbert, Arizona

Dibble provided site grading and drainage, water, sewer, storm drain, and fire protection design services for Phase I of an approximate 300,000 square foot, 100-bed hospital located at the southeast corner of Val Vista Drive and the San Tan Freeway. The 30-acre site in Gilbert, Arizona, included parking areas to accommodate 860 vehicles in the first phase. Special coordination was required with the Maricopa County Environmental Services Department for approval to construct the on-site public water lines, as well as phased permitting services through the Town of Gilbert to expedite the construction schedule. We adhered to an aggressive civil design schedule to enable the contractor to begin the site work while the building was still under design. Dibble also worked with ADOT to coordinate the site design relating to the future Val Vista and San Tan interchange.
