

Papago Gateway Center

as a subconsultant

Tempe, Arizona

Dibble provided site, utility, and grading and drainage design services for the new six-story Papago Gateway Center, a 260,000 square-foot Class A development. It is the first commercial biotechnology/laboratory and LEED® Gold certified corporate office facility in Tempe. The project incorporated an on-site parking structure, a water reclamation system, and underground storm water retention. The campus is built on a prominent five-acre site at the northwest corner of Mill Avenue and Washington Street, a gateway to the City of Tempe, Papago Park Center and Arizona State University.
